The global Chiplet Packaging Technology market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Chiplet packaging technology, also known as chiplet-based packaging or chiplet integration, is an advanced semiconductor packaging approach that involves dividing a complex system-on-chip (SoC) or integrated circuit (IC) into smaller functional chiplets. These chiplets are then interconnected and assembled into a single package to create a highly integrated and efficient semiconductor solution. Chiplet packaging aims to address the challenges posed by the increasing complexity and size of modern ICs and enable better performance, scalability, and customization in semiconductor devices.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US$142.1 billion, up 17.0% year-on-year, sales in Europe were US$53.8 billion, up 12.6% year-on-year, and sales in Japan were US$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US$336.2 billion, down 2.51% year-on-year.
