## Abstracts

The global CLT Acid market size is predicted to grow from US\$ 44.41 million in 2025 to US\$ 59.91 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2025, global CLT acid production reached 14,200 tons, with an average selling price of US\$3,196 per ton. CLT Acid or 5-Amino-2-chlorotoluene-4-sulfonic acid is an organic compound with the chemical formula  $C_7H_8ClNO_3S$ . It is a white crystalline powder that is used as an intermediate in the production of dyes and pigments. It can be prepared by the reaction of 5-amino toluene-4-sulfonic acid with chlorine.

The global market for CLT Acid, a key intermediate for red organic pigments, is intrinsically linked to demand from downstream industries such as paints and coatings, inks, rubber, and plastics. The market landscape is characterized by a degree of concentration, with major producers including Zhejiang Qinyan Technology from China and Emco Dyestuff from India. Its growth trajectory is primarily driven by the expansion of global manufacturing, particularly in the construction and packaging sectors within the Asia-Pacific region. However, this growth faces headwinds from increasingly stringent environmental regulations and volatility in raw material costs. Future opportunities for the market may arise from the rising demand for high-performance and specialty pigments in end-use industries, coupled with ongoing technological advancements aimed at greener and more efficient production processes.
