The global CNC Lathe Numerical Control System market size is predicted to grow from US\$ 1423 million in 2025 to US\$ 1963 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, global CNC Lathe Numerical Control System production reached 419,000 units, with an average selling price of US\$3,471 per unit. The Numerical Control System of a CNC lathe is the 'control brain' installed on a CNC lathe/turning center. It consists of a CNC controller (hardware + real-time system)/PLC, servo drives and motors, position feedback (encoders/gratings), a human-machine interface (HMI), I/O and communication, and parameter and process software (interpolation, acceleration/deceleration, tool compensation, thread/constant surface speed, macro programs, etc.). It is used to convert part programs (G-code/conversational programming) into multi-axis linkage feed and spindle control, achieving high-precision, repeatable turning operations. End-use applications cover automotive and new energy, machinery, mold and precision parts, aerospace and medical devices, and other fields. Upstream industries include industrial computing and motion control chips/boards, servo drives/drives, encoders, touch screens and industrial networks, software and functional safety; midstream industries include CNC system manufacturers; and downstream industries include CNC lathe manufacturers. Gross profit margins are typically around 40–65%.
