A composite material cage is an interbody fusion implant made from reinforced polymer composites, offering radiolucency, high strength, and biocompatibility for spinal fusion procedures. It provides structural support, promotes bone ingrowth, and reduces imaging interference compared with metal cages.

The industrial chain includes upstream suppliers of PEEK polymers, carbon fiber reinforcements, surface coating materials, and precision machining tools. The midstream consists of medical implant manufacturers responsible for molding, machining, surface texturing, sterilization, and quality validation. Downstream applications include spinal fusion surgeries in hospitals, orthopedic centers, and neurosurgical departments.

United States market for Composite Material Cage is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
