The global Conditional Access Module(CAM) market size is predicted to grow from US$ 1393 million in 2025 to US$ 1875 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

A Conditional Access Module (CAM) is a hardware security module used in pay-TV, digital broadcasting and IPTV systems to decrypt protected content via CI or CI+ interfaces. In 2024, the global average price of a CAM is approximately US$7.8 per unit, with worldwide production reaching about 175 million units. The industry maintains a gross margin of 18%?32%, influenced by chipset security architecture, CAS licensing costs, DRM integration, and hardware encryption robustness. The supply chain consists of upstream secure chipsets, PCB substrates, encryption firmware, CAS/DRM licenses, and card interfaces; midstream manufacturers perform board assembly, secure firmware loading, encryption verification, CI/CI+ certification and testing; downstream clients include pay-TV operators, set-top-box manufacturers, conditional access system providers, OTT/IPTV integrators and smart TV OEMs.

Global CAM demand will remain stable as CI+ 2.0/4.0 continues to support secure broadcast decryption for DVB and IPTV operators. While OTT growth shifts part of the market away from traditional CAMs, emerging hybrid STBs and conditional access upgrades sustain hardware replacement cycles. The integration of higher-security chipsets and CAS/DRM convergence will gradually increase unit value, supporting a 4% CAGR through 2031.
