CR foam is made by mixing NBR (nitrile rubber) and PVC (polyvinyl chloride) for foaming, and its appearance and characteristics are similar to pure CR (chloroprene rubber) foam board. CR rubber products are a new type of environmentally friendly plastic foam material with good physical and mechanical properties, including oil resistance, heat resistance, flame resistance, sunlight resistance, ozone resistance, acid and alkali resistance, and chemical reagent resistance. It has high tensile strength, elongation, good weather resistance, ozone resistance, and aging resistance, as well as corresponding flame retardancy. Widely used in electronic industries such as mobile phones and computers, as well as in spare parts for automobiles and home appliances, especially in battery components for new energy electric vehicles, it is an indispensable material.

United States market for CR Foam is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for CR Foam is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for CR Foam is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
