Cross cutting system is a mechanical system used to accurately cut materials into specified sizes along their width. It is widely used in production lines in wood, metal, plastic, textile, paper and other industries. The system usually consists of a conveying device, a cutting unit (such as a circular saw, a blade or a laser cutting device), a positioning control device and an automatic control system, which can achieve high-speed, high-precision continuous or intermittent cutting operations. The core advantage of the cross cutting system is to improve processing efficiency, reduce material waste, and ensure the consistency of finished product size. It is an indispensable key equipment in mass production.
