The global Cyperus Rotundus Extract market size is predicted to grow from US\$ 36.98 million in 2025 to US\$ 51.51 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2025, the global production of Cyperus rotundus extract was approximately 1800 tons, with an average selling price of about US\$21 per kilogram. The production capacity in 2025 was 2100 tons, with an average gross profit margin of approximately 20-30%. Cyperus rotundus extract is a substance extracted from the dried rhizomes of the Cyperus rotundus plant, a member of the sedge family. It mainly contains volatile oils, terpenes, steroidal saponins, and flavonoids. Cyperus rotundus extract has the effects of regulating qi and relieving depression, and regulating menstruation and relieving pain. It is often used to treat symptoms such as chest and abdominal distension and pain, and irregular menstruation caused by liver qi stagnation.

The upstream of the Cyperus rotundus extract industry chain is centered on Cyperus rotundus medicinal materials as the core raw material, and its quality and price are directly affected by the origin, harvesting season, and planting scale; the downstream application industries are concentrated in the pharmaceutical field, the health and wellness field (liver-protecting and liver-nourishing health products, functional foods), and the cosmetics industry. Its demand is closely related to the development of traditional Chinese medicine and consumers' preference for natural and effective ingredients.

The market for Cyperus rotundus extract is currently experiencing steady growth, driven primarily by the continuous demand for natural functional ingredients from the downstream traditional Chinese medicine granules, health food, and cosmetics

industries. On the supply side, the market is relatively fragmented, with numerous manufacturers and intense competition. Product prices and profit margins vary significantly depending on specifications – standard low-content products are highly commoditized with thin profit margins, while high-purity, customized high-end extracts have higher technological barriers and profit potential. Fluctuations in the price and quality control of upstream *Cyperus rotundus* raw materials are key factors affecting the stability of the entire industry chain. Future market development will focus on technological innovation, improving extraction efficiency and product standardization to reduce costs. Simultaneously, in-depth development of applications, such as expansion into niche functional areas like emotional health and women's care, will be crucial for opening up new growth opportunities. It is expected that in the coming years, companies with large-scale production capabilities, raw material control, and core technological advantages will further increase market concentration and lead the industry towards higher quality and higher value-added products.
