## Abstracts

The global Decorative and Artistic Materials market size is predicted to grow from US\$ 10956 million in 2025 to US\$ 15582 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Decorative and artistic materials refer to various materials used in interior and exterior decoration, artistic creation, and craft production, including pigments, coatings, paper, fabrics, wood, ceramics, and glass. Their parameters encompass physical properties (hardness, weather resistance, gloss), chemical properties (VOC content, corrosion resistance), environmental attributes (biodegradability, renewability), and aesthetic attributes (color, texture, transparency). These materials address the shortcomings of traditional decorative materials, such as insufficient environmental protection, poor durability, and limited artistic expression, providing designers and artists with richer creative mediums. The average price of this product is approximately US\$2,700 per ton, with global sales of approximately 4.14 million tons.

The value chain of decorative and artistic materials is as follows: upstream, it relies on raw materials such as wood, pulp, mineral pigments, and resins, with parameters including wood sustainability certification rate, pigment VOC content, paper weight, and fiber source; midstream manufacturing mainly involves single-line capacity of 50,000–100,000 tons of paper/year or 10,000–20,000 tons of coatings/year, determining cost and supply capacity; downstream applications are concentrated in the building decoration, artistic creation, and craft industries, with demand parameters including weather resistance, environmental friendliness, and aesthetic expression. Future development trends lie in environmentally friendly materials (low VOC, biodegradable), digital art materials (resins for 3D printing), and cross-border integration (art + architecture + fashion). These innovations will become the driving force for industry

growth.
