Abstracts

The global Dehydrated Skin Product market size is predicted to grow from US\$ 34826 million in 2025 to US\$ 50001 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Dehydrated skin products are functional skin care products specifically designed for dry skin types that have low sebum secretion, low stratum corneum moisture content, and are prone to tightness, flaking, roughness, and even fine lines.

The dehydrated skin product market continues to grow, primarily driven by multiple factors, including increased environmental pollution, rising risks of skin barrier damage due to climate change, heightened consumer awareness of skincare, and upgraded demands for anti-aging and functional skincare. As consumers gain a deeper understanding of core needs such as repair, moisturizing, and soothing, high-efficacy formulas rich in ceramides, hyaluronic acid, squalane, natural oils, and biomimetic lipids are increasingly favored. Simultaneously, the expansion of post-medical aesthetic repair scenarios and the rise of pure beauty and sustainable packaging trends are further driving brands to seek a balance between safety, gentleness, and technological sophistication, accelerating the professionalization, refinement, and premiumization of the dehydrated skin care category.
