A healing abutment has been placed on top of your implant. Its job is to shape and tighten the gum tissue and to prevent food from settling around the implant.

The dental healing abutment market is expanding as a crucial component in dental implant procedures. These healing abutments, also known as healing caps, are placed on implants after surgery to facilitate tissue healing and shape the gums before the placement of permanent prosthetics. The market's growth is driven by the demand for successful and esthetically pleasing implant outcomes. Dental healing abutments aid in achieving proper soft tissue contour, enhancing the final restoration's fit and appearance. As dental implant procedures become more common and patient expectations rise, the dental healing abutment market is expected to continue growing, providing dental professionals with essential tools for optimal implant success and patient satisfaction.
