The global Dimethyl Acetyl Succinate (DMAS) market size is predicted to grow from US\$ 14.38 million in 2025 to US\$ 19.70 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2025, global production of Dimethyl Acetyl Succinate (DMAS) reached 6,714 tons, with an average selling price of US\$2,193 per ton. Dimethyl Acetyl Succinate (DMAS) is a food additive intermediate. It is mainly used as intermediates for the production of food colors and tobacco essence.

The global market for Dimethyl Acetyl Succinate (DMAS) is a highly concentrated niche sector, closely tied to the stable demand for synthetic food colorants (particularly tartrazine) from downstream industries such as food and feed. Currently, there are very few major producers worldwide, with the market being dominated by a limited number of companies. The future development trend of this market is generally stable, expecting slow growth alongside the expansion of downstream industries. Its primary growth opportunities lie in the continuous development of the global food industry and the application support synthetic colorants gain due to their cost and stability advantages. However, its growth also faces significant obstacles, including a relatively limited market space, heavy reliance on a single downstream industrial chain (e.g., food colorants), and potential challenges arising from trends towards natural colorant substitution and changes in food safety regulations across different regions.
