The global Dioscorea Nipponica Extract market size is predicted to grow from US\$ 17.53 million in 2025 to US\$ 25.97 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2025, the global production of Dioscorea nipponica extract is approximately 560 tons, with an average selling price of about US\$32 per kilogram. The production capacity in 2025 is 780 tons, with an average gross profit margin of approximately 20-30%. Dioscorea nipponica extract is a plant extract derived from the rhizomes of the Dioscorea nipponica plant, a member of the Dioscoreaceae family. Its main components are steroidal saponins, which have effects such as dispelling wind and dampness, promoting blood circulation, relieving cough and asthma, and anti-inflammatory and analgesic properties. It can be used to treat rheumatic pain, joint sprains, and cough with phlegm, and is also used in research and development due to its anti-tumor and uric acid-lowering effects.

The upstream direct raw material for Dioscorea nipponica extract is the dried rhizome of the medicinal plant Dioscorea nipponica. Its quality and saponin content are directly affected by the origin, harvesting season, and initial processing methods. Downstream, it is mainly used in three major areas: the pharmaceutical industry (as a core raw material for traditional Chinese medicines and hospital preparations that dispel wind and dampness and promote blood circulation), the health food industry (for dietary supplements for joint care, anti-fatigue, and immune enhancement), and the pharmaceutical manufacturing industry (its high-purity diosgenin serves as an important precursor raw material for the synthesis of steroidal hormones).

Dioscorea nipponica extract is a natural ingredient derived from the traditional Chinese

medicinal plant *Dioscorea nipponica*. It possesses multiple benefits, including antioxidant, anti-inflammatory, detoxification, and immune-enhancing properties, and is widely used in health products, cosmetics, and pharmaceuticals.
