Dipped Radial Leaded Capacitors are electronic components whose internal dielectric material has been impregnated (such as oil or resin) to improve insulation performance and stability. Its leads are radially led out from one end of the capacitor for easy installation and welding. This type of capacitor has high withstand voltage, low loss and good temperature stability, and is widely used in power supply filtering, motor starting, lighting equipment and industrial control. Impregnation can effectively prevent dielectric aging and extend the life of the capacitor.
