The global Driver Training Management Software market size is predicted to grow from US\$ 160 million in 2025 to US\$ 251 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Driver Training Management Software (DTMS) is a digital tool designed to streamline, organize, and enhance the management of driver training programs. It is used by driving schools, fleet operators, or organizations involved in driver education and training to manage the entire training lifecycle, from scheduling and curriculum management to performance tracking and compliance monitoring. The software helps ensure that drivers receive proper training, assessment, and certification, all while maintaining compliance with local regulations.

The development of driver training management software is driven by multiple factors, including the strengthening of standardized supervision in the driver training industry, the inherent need to improve the operational efficiency of driving schools, students' expectations for convenient and transparent service experiences, and the maturity of artificial intelligence and mobile internet technologies. On the one hand, traffic management departments continue to promote reforms, mandating that driving schools connect to the regulatory platform and achieve traceability of the training process. On the other hand, driving schools urgently need to optimize instructor scheduling, vehicle management, training hour recording, exam booking, and financial accounting through digital systems to reduce labor costs and compliance risks. At the same time, students can register online, view courses, take mock exams, and track progress through mobile apps, promoting the intelligent and personalized upgrading of driver training services, and jointly accelerating the popularization and functional deepening of driver training management software.
