The global Dry Cutting Gear Shaping Machine market size is predicted to grow from US$ 1560 million in 2025 to US$ 2054 million in 2031; it is expected to grow at a CAGR of 4.7% from 2025 to 2031.

Dry Cutting Gear Shaping Machine is a gear processing equipment that uses dry cutting technology. It is mainly used to efficiently and accurately process gear parts such as spur gears and helical gears. Unlike traditional wet gear shaping machines, dry gear shaping machines do not use cutting fluid during the processing process. By optimizing tool materials and machine tool structures, high-speed and high-precision gear processing is achieved, while reducing environmental pollution and processing costs. Its core advantages are energy saving and environmental protection, high processing efficiency and low maintenance costs.
