Earthing is used to protect you from an electric shock. It does this by providing a path (a protective conductor) for a fault current to flow to earth. It also causes the protective device (either a circuit-breaker or fuse) to switch off the electric current to the circuit that has the fault.

The Earthing Protection System market plays a vital role in ensuring electrical safety by providing effective grounding solutions for various applications. The increasing focus on safety regulations, the growth of electronic devices, and ongoing infrastructure development contribute to the demand for reliable earthing protection systems.
