Abstracts

The global Electric Bicycle Small Central Motor (Below 250W) market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

In recent years, for the excellent electric-assisted bicycles on the market, the battery is generally hidden in the down tube of the frame; the motor is hidden in the bottom bracket. This kind of motor, which is located in the bottom bracket part of the frame and replaces the position of the center shaft, has a gearbox structure, and is generally called a 'central motor' in the market. The mid-mounted motor is the optimal solution among mainstream products in the market. Most of the best-selling mid-to-high-end models in Europe and the United States are designed with mid-mounted motors. This is because the mid-mounted motor has more advantages, lighter weight and higher energy efficiency than the hub motor or various old products, so it is adopted by most manufacturers.
