The global Electric Powerd Telescopic Boom Mobile Elevating Work Platform (MEVP) market size is predicted to grow from US\$ 2890 million in 2025 to US\$ 7660 million in 2032; it is expected to grow at a CAGR of 14.6% from 2026 to 2032.

An electric powered telescopic boom mobile elevating work platform is a type of MEWP that uses electric power, typically battery-based, to drive both mobility and a straight telescopic boom for lifting personnel and tools to elevated positions with long vertical reach and horizontal outreach. Compared with diesel-powered models, electric telescopic boom MEWPs offer zero on-site emissions, low noise, and high energy efficiency while retaining the key advantages of straight boom platforms in terms of working height and outreach, making them well suited for indoor, urban, and environmentally sensitive applications.

The electric telescopic boom MEWP market is primarily driven by the electrification trend in access equipment and increasingly strict environmental regulations. Growing demand for zero-emission and low-noise machinery in urban construction, industrial maintenance, and indoor applications is limiting the use of diesel-powered straight boom platforms and accelerating the adoption of electric alternatives. At the same time, global carbon reduction targets, tighter emission standards, and corporate ESG initiatives are increasing the willingness of end users and rental companies to invest in electric equipment. In addition, advances in battery technology and overall machine efficiency have reduced concerns over runtime and performance, enabling electric telescopic boom platforms to retain long reach capabilities while expanding their addressable applications, supporting sustained market growth.
