The global Electric Vehicle On-board Battery Swap Connector market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

An electric vehicle (EV) on-board battery swap connector is a specialized connector that facilitates the quick and secure exchange of an EV"s on-board battery pack with a fully charged one. This connector is typically used in battery swap stations, where EV owners can rapidly replace their depleted on-board batteries to extend their vehicle"s range without waiting for a traditional charging process. It plays a crucial role in minimizing downtime and addressing range anxiety for EV users.

Global EV sales continued strong. A total of 10,5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
