Elevator Overload Weighing Sensor is a safety device designed to detect and measure the weight inside an elevator cabin to prevent overloading. It ensures that the total load does not exceed the elevator's designated capacity, thereby protecting passengers and the elevator system from potential hazards. These sensors utilize various technologies such as strain gauges, capacitive elements, or hydraulic mechanisms to provide accurate weight readings. Integrated with the elevator control system, they trigger alerts, inhibit elevator movement, or notify building management when an overload condition is detected, ensuring safe and efficient elevator operation.
