## Abstracts

The global Embryo Culture Medium market size is predicted to grow from US$ 710 million in 2025 to US$ 948 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Embryo culture medium mainly includes water, inorganic ions, energy substrates, amino acids, vitamins, proteins and other components. Each of these components plays an important role in the growth and development of the embryo. After the test tube baby technology takes the sperm and eggs out of the body, the fertilization, cleavage, and blastocyst formation are completed in vitro, and the whole process is carried out in the culture medium. For fertilized embryos, the culture medium provides a suitable environment and essential nutrients for the growth and development of the embryos in vitro.

The global medical device market is estimated to be US$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for healthcare from an aging population, rising prevalence of chronic and infectious diseases, and expansion in emerging markets. The medical devices market plays an important role in the healthcare spending industry. The medical devices market is driven by several factors, mainly including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, rising healthcare spending, and increasing awareness for early disease diagnosis and treatment, among others.
