The global Endoscope Enzymatic Cleaner market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Endoscope enzymatic cleaner is a specialized cleaning solution used in the reprocessing of endoscopes to remove organic debris and contaminants from the instrument's surfaces. Enzymatic cleaners contain protease enzymes that break down proteins, lipase enzymes that break down lipids (fats), and amylase enzymes that break down carbohydrates. These enzymes work together to effectively dissolve and remove various biological substances that may adhere to the endoscope during medical procedures.

The global market for endoscope enzymatic cleaners is experiencing steady growth due to the increasing prevalence of endoscopic procedures, rising awareness about infection control, and the need for effective reprocessing of medical instruments. Endoscope enzymatic cleaners play a critical role in ensuring the safety of patients by preventing cross-contamination and reducing the risk of healthcare-associated infections (HAIs). As healthcare facilities worldwide prioritize patient safety and infection prevention, the demand for efficient and safe endoscope reprocessing solutions is driving the market growth. North America and Europe are the major markets for endoscope enzymatic cleaners due to their well-established healthcare infrastructure, high adoption of endoscopic procedures, and stringent regulatory guidelines. The Asia-Pacific region is witnessing significant growth due to increasing healthcare expenditure, growing awareness about infection control, and rising demand for minimally invasive procedures.
