An intubating stylet is a malleable metal wire designed to be inserted into the endotracheal tube to make the tube conform better to the upper airway anatomy of the specific individual. This aid is commonly used with a difficult laryngoscopy.

The global population is entering an aging stage, and the number and proportion of elderly people in almost every country in the world are increasing. With the increase of the elderly population, the incidence rate of various chronic diseases (such as cardio cerebrovascular diseases, diabetes, tumors, etc.) is increasing year by year, and the number of medical institutions and inpatients is increasing rapidly. The large number of patients, especially hospitalized patients, has brought great market space to the medical device industry, especially the development of disposable medical consumables.
