The global Fiberglass-Reinforced Plastic Conduit market size is predicted to grow from US\$ 3944 million in 2025 to US\$ 6130 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Fiberglass reinforced plastic (FRP) conduits are high-strength composite pipes made of glass fiber as the reinforcing material and resin as the matrix through winding, pultrusion, or molding processes. They are lightweight, corrosion-resistant, have excellent insulation properties, high mechanical strength, and long service life. They are commonly used in power cable protection, communication pipelines, industrial pipelines, and underground infrastructure construction, providing reliable, durable, and safe piping solutions for electrical and transmission systems in complex environments.

The FRP conduit industry chain starts with upstream raw materials, mainly including glass fiber (untwisted roving, chopped strands, fabrics), resin systems (unsaturated polyester, epoxy, vinyl ester), fillers, and additives. The midstream involves FRP conduit manufacturing and system integration, completing pipe forming, curing, and inspection through processes such as winding, pultrusion, and molding, and providing joints, flanges, and customized solutions. Downstream applications include power and communication conduits, petrochemicals, municipal engineering, rail transit, and corrosion-resistant piping for industrial facilities. In terms of profitability, FRP conduits belong to the medium-margin engineering material manufacturing sector, with the industry's overall gross margin typically between 20% and 30%. Companies with large-scale production, engineering support, and high-specification corrosion-resistant products can approach the upper limit, while profitability is significantly affected by fluctuations in fiberglass and resin prices. Regarding capacity utilization, demand is related to the infrastructure/industrial investment cycle, with the industry's normal

capacity utilization rate at approximately 65%–80%. This can increase to over 80% during peak delivery periods for power and municipal projects, while smaller companies experience greater fluctuations during off-seasons.

Global production of fiberglass reinforced plastic conduits is projected to reach 134.4 million meters in 2025, with an average selling price of US\$30 per meter.

United States market for Fiberglass-Reinforced Plastic Conduit is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
