Fluidized bed granulator coating machine is a highly efficient equipment that uses fluidized bed technology to granulate, dry and coat materials. It is widely used in pharmaceutical, food, chemical and other industries. Its working principle is to suspend and fluidize powder or granular materials by controlling the airflow, and evenly spray the adhesive or coating liquid through the spray system to gradually shape the particles or form a uniform coating layer. The equipment has the characteristics of rapid drying, uniform coating, and high process integration. It can be used to produce functional preparations such as sustained-release, controlled-release, and enteric-coated to improve product quality and stability.
