The global Fluopicolide market size is predicted to grow from US\$ 88.04 million in 2025 to US\$ 138 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

In 2025, global Fluopicolide production reached approximately 1,401 tons, with an average global market price of around US\$64 per kilogram. Fluopicolide is a fungicide used in agriculture to control diseases caused by oomycetes such as late blight of potato. It is classed as an acylpicolide and its chemical name is 2,6-dichloro-N-[[3-chloro-5-(trifluoromethyl)pyridin-2-yl]methyl]benzamide. Fluopicolide has been shown to be effective at controlling *Phytophthora infestans*, *Phytophthora capsicii*, *Phytophthora porri*, *Plasmopara viticola*, *Peronospora parasitica*, *Peronospora tabacina*, *Peronospora sparsa*, *Pseudoperonospora cubensis* and *Bremia lactucae*.

Fluopicolide is a systemic benzamide fungicide developed by Bayer CropScience, primarily used to control oomycete diseases (e.g., downy mildew, late blight) in vegetables and fruits. Its unique mode of action makes it valuable for resistance management. Following the expiration of its patent in China in 2019, the market has seen increased participation from local manufacturers. It is currently authorized and used in multiple countries globally, including those in Europe and America.

A key market trend is the expansion of mixture formulations. To broaden the control spectrum and delay resistance, fluopicolide is often combined with fungicides having different mechanisms, such as propamocarb or cyazofamid. Concurrently, stricter global regulations on pesticide residues, like the maximum residue limits set by the European Union for tomatoes and grapes, are driving the development of rapid on-site detection methods.

Opportunities for fluopicolide stem from its high efficacy, favorable environmental

profile, and lack of cross-resistance with other fungicides. Major challenges include its potential toxicity to aquatic organisms (e.g., fish) and evolving regulatory policies that may impose stricter limits on its use patterns and application rates.
