The global Fuel Cell Recycling market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Fuel cell recycling refers to the process of recovering valuable materials and components from used or end-of-life fuel cells to reduce waste, conserve resources, and support the sustainable development of fuel cell technology. Fuel cells are electrochemical devices that convert hydrogen and oxygen into electricity and water, and they are used in various applications, including vehicles, power generation, and portable devices. Recycling fuel cells can help recover precious metals, reduce environmental impact, and promote the circular economy.

According to data released by the China Association of Automobile Manufacturers, in December 2022, the production and sales of hydrogen fuel cell vehicles in China was 653 and 607, respectively. In the whole year of 2022, the production and sales of hydrogen fuel cell vehicles was 3,626 and 3,367, a year-on-year increase of 105.4% and 112.8%, respectively. According to our Fuel Cell Research Center, by the end of 2022, the number of fuel cell vehicles in the world had reached 67,000 units, a year-on-year increase of 36.6%. Among them, the number of fuel cell vehicles in China was 12,682 units.
