## Abstracts

The global Galvanised Steel Wire for Cable Armouring market size is predicted to grow from US\$ 892 million in 2025 to US\$ 1263 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

In 2025, global Galvanised Steel Wire for Cable Armouring production reached approximately 1,970 k tons, with an average global market price of around US\$463 per ton. Galvanised steel wire for cable armouring is a high - strength wire with a zinc-coated surface, typically made from carbon-steel, which is either woven or spirally wound around the cable's insulation core to provide mechanical protection against crushing and piercing, as well as electromagnetic shielding and corrosion resistance due to the zinc coating.

The global market for galvanized steel wire for cable armouring is developing steadily, driven by investments in power grid construction, energy development, and infrastructure. Currently, the rapid expansion and intelligent upgrading of ultra-high voltage power grids serve as a core growth engine. In terms of product types, it mainly includes low-carbon and high-carbon steel wires. Key application areas are infrastructure, oil and gas extraction, and power and communication cables.

Clear market trends are emerging. Firstly, the global energy transition presents a significant opportunity. The large-scale construction of renewable energy projects like wind and solar farms, along with the corresponding grid integration needs, provides sustained demand for galvanized steel wire. Secondly, emerging markets, particularly in the Asia-Pacific region, are generating strong demand due to rapid industrialization and urbanization. Furthermore, technological advancement is trending towards lighter weight, higher strength, and better corrosion resistance. The digital and intelligent

transformation of manufacturing processes is also a distinct trend.

However, the market faces challenges. Fluctuations in the price of raw materials like steel directly impact manufacturing costs. Meanwhile, increasingly stringent environmental regulations may raise production expenses. The stability of the global supply chain also poses a potential risk.
