The global Gastrointestinal Circular Stapler market size is predicted to grow from US$ 554 million in 2025 to US$ 817 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Gastrointestinal circular staplers are useful in minimally invasive procedures because they require only narrow openings and can quickly cut and seal tissue and blood vessels. Skin staplers are used externally to close skin under high tension, such as on the skull or torso of the body.

The global medical device market is estimated to be US$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for healthcare from an aging population, rising prevalence of chronic and infectious diseases, and expansion in emerging markets. The medical devices market plays an important role in the healthcare spending industry. The medical devices market is driven by several factors, mainly including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, rising healthcare spending, and increasing awareness for early disease diagnosis and treatment, among others.
