## Abstracts

The global 10 Gigabit Electrical Interface Modules market size is predicted to grow from US\$ 438 million in 2025 to US\$ 736 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

The transmission rate of 10 Gigabit electrical interface modules is 10Gbps, which can realize the transmission of 10G network. The performance is relatively stable and is generally used in 10 Gigabit Ethernet. A major advantage of 10 Gigabit electrical interface modules is that they can convert optical ports on switches into electrical ports to meet the demand for insufficient RJ45 ports on switches.

**Steady growth in market size:** In recent years, benefiting from global cloud computing and ultra-large-scale data center construction, the global 10 Gigabit electrical interface module market has shown a steady growth trend in recent years, with the market size expanding and the market share continuing to increase.

**High technical barriers:** The technology involved in electrical interface modules is complex, including high-speed signal processing, thermal management, electromagnetic compatibility, etc., which puts high demands on the company's R&D capabilities and technical accumulation. New entrants need to invest a lot of resources in technology research and development and talent training.

**Technological innovation and product upgrades:** With the application of new technologies, the performance of electrical interface modules continues to improve, power consumption is reduced, and volume is reduced, meeting the needs of high-density and high-speed communications. Technological advances have also enabled electrical interface modules to be used in more emerging fields, such as artificial

intelligence and the Internet of Things.
