The global 12-inch Dual Spindle Fully Automatic Dicing Machine market size is predicted to grow from US\$ 183 million in 2025 to US\$ 285 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2025, global production of 12-inch dual spindle fully automatic dicing machines reached 320 units, with an average selling price of \$584,210 per unit. The 12-inch dual spindle fully automatic dicing machine is a high-end dicing equipment for mass production dicing of 300 mm wafers. It features two independent dicing spindles (dual/twin spindles) and corresponding blades/process units on the same machine, achieving fully automated functions such as FOUN/foam loading and unloading, vision alignment, closed-loop depth/height measurement, blade wear compensation, cleaning and particle control, and SECS/GEM/MES integration. The core value of the dual spindle lies in supporting dual/parallel dicing, stepped dicing, or rapid switching between different blades/processes to improve throughput (UPH) and reduce the manufacturing cost per die. The upstream of the industry chain includes precision motion control: direct drive/servo platforms, encoders, guide rails, controllers and vibration/thermal drift suppression; spindle systems: high-speed, high-rigidity spindles, bearings and dynamic balancing; key consumables: diamond blades/wheels, dicing tape and frames; midstream is complete machine manufacturing; and downstream serves wafer fabs, packaging and testing plants, and their automation/cleanroom/data system integrators. Gross profit margins are typically around 30%–50%.
