The global 1,2,4-Trimethylbenzene market size is predicted to grow from US\$ 384 million in 2025 to US\$ 468 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

1,2,4-Trimethylbenzene, a flammable colorless liquid with a strong odor, occurs naturally in coal tar and petroleum. It is a major component (typically 40%) of a petroleum refinery distillation fraction known as the C9 aromatic fraction (or simply the C9 fraction).

1,2,4-Trimethylbenzene is widely used as an intermediate in the production of various chemicals, including trimellitic anhydride, which is used in plasticizers, resins, and coatings. The growing demand for petrochemical products and derivatives drives demand for trimethylbenzene.

1,2,4-Trimethylbenzene is derived from petroleum, and fluctuations in crude oil prices can directly impact production costs. The volatility of crude oil markets, driven by geopolitical tensions, supply chain disruptions, and fluctuating global demand, creates uncertainty in pricing.
