1,3-Propanesulfonic Acid Lactone is an organic sulfur compound, a colorless liquid or white to light yellow crystals, soluble in chloroform (a little), methanol (a little), and slightly soluble in water. It is an important additive for lithium-ion battery electrolytes, which can form an interface film (SEI film) on the surface of the negative electrode during the initial charge and discharge, effectively inhibiting the reaction between the electrolyte and graphite, and improving the cycle life and storage stability of the battery. As an intermediate in organic synthesis, its derivatives can improve the surface properties of substances and are widely used in the field of pharmaceuticals and chemicals.
