The global 1.6T Optical Engine market size is predicted to grow from US$ 279 million in 2025 to US$ 1650 million in 2032; it is expected to grow at a CAGR of 29.0% from 2026 to 2032.

A 1.6T Optical Engine is a high-speed optoelectronic component designed for next-generation data centers and AI computing clusters, typically providing an aggregate optical communication bandwidth of approximately 1.6 Tb/s (terabits per second). Its primary function is to convert high-speed electrical signals generated by switching chips, GPUs, and AI accelerators into optical signals for high-bandwidth transmission over optical fibers, and to convert received optical signals back into electrical signals. A 1.6T optical engine generally integrates multiple high-speed optical channels, such as an 8?200G parallel architecture, together with key components including lasers, optical modulators, photodetectors, laser drivers, and transimpedance amplifiers (TIAs). Compared with conventional copper interconnects, 1.6T optical engines offer higher bandwidth, lower power consumption per transmitted bit, and longer transmission distances, making them an important optical interconnect technology for next-generation AI data centers.In 2025, global 1.6T Optical Engine production reached approximately 815,000 units, with an average global market price of around US$350 per unit. Annual production capacity is estimated at 1,000,000 units. Gross Profit Margin: 45.0%.The 1.6T Optical Engine industry chain covers upstream optical and semiconductor components, including lasers, optical modulators, photodetectors, drivers, TIAs, DSPs, optical coupling components, and advanced packaging materials. These components are integrated into optical engines by specialized manufacturers, which are then deployed in 1.6T optical transceivers, co-packaged optics (CPO), on-board optics (OBO), and high-speed AI data-center interconnect systems. As AI clusters move toward higher bandwidth and greater port density, demand is increasingly shifting toward highly integrated, low-power optical engines. The 1.6T Optical Engine is becoming an important value-added component in the transition from 800G to 1.6T

optical connectivity. Its growth is supported by the rapid expansion of AI data centers, increasing GPU-to-GPU and switch-to-switch bandwidth requirements, and the limitations of copper interconnects in power consumption and transmission distance. In the medium term, improvements in silicon photonics, laser integration, packaging efficiency, and manufacturing yield are expected to be key factors determining product cost, performance, and adoption.

United States market for 1.6T Optical Engine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for 1.6T Optical Engine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for 1.6T Optical Engine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key 1.6T Optical Engine players cover TFC Communication, POET Technologies, Marvell Technology, Ciena, Acacia Communications, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
