The global 2-Amino-2-Methyl-1-Propanol for Buffer Solutions market size is predicted to grow from US\$ 390 million in 2025 to US\$ 667 million in 2031; it is expected to grow at a CAGR of 9.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

2-Amino-2-methyl-1-propanol is a commonly used biological buffer with stable chemical properties, a pKa value of about 8.1, and a buffer range of pH 7.0-9.0. It is widely used in biochemical and molecular biology experiments, such as electrophoresis, protein extraction, and nucleic acid preservation. It has good water solubility and low ionic strength, and is not easy to form complexes with metal ions, so it has little effect on enzyme activity and is suitable for a variety of biological reaction systems.

With the development of biomedicine, diagnostic technology and biological preparations, the demand for high-purity, low-endotoxin and customizable buffer systems continues to grow, and Tris buffers are moving towards higher quality and multifunctionality. At present, high-purity Tris products dedicated to cell culture, gene editing, vaccine preparation and other fields have appeared on the market, and are optimized with automated, high-throughput experimental platforms. In the future, Tris buffers will play a greater role in precision medicine, biopharmaceuticals and green laboratory construction.
