A 2-color pyrometer is an instrument used for measuring the temperature of objects based on the color (wavelength) of the light they emit. It operates on the principle that objects emit thermal radiation according to their temperature, with hotter objects emitting shorter wavelengths of light. A 2-color pyrometer typically measures the emitted light in two different wavelengths, usually red and infrared, allowing it to calculate temperature by comparing the intensities of the two colors. This device is valuable in industries where precise temperature measurement is critical, such as manufacturing, steel production, and semiconductor processing.

The global 2-Color Pyrometer market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
