The global 2-Phenylthioethyl Acrylate (PETA) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

2-Phenylthioethyl Acrylate (PETA) is an acrylate monomer that is used in the production of a wide range of polymers and copolymers. It is a clear, colorless liquid that has a characteristic thiol odor, and is soluble in a variety of organic solvents.

PETA is used in a variety of applications, including as a crosslinking agent in the production of coatings, adhesives, and plastics. It is also used as a comonomer in the production of polymers and copolymers with improved mechanical properties, such as increased hardness and scratch resistance.

One of the key features of PETA is its ability to undergo free radical polymerization, which makes it a versatile monomer for use in a range of polymerization reactions. It has a relatively low reactivity and a high molecular weight, which makes it well-suited for use as a reactive diluent in the production of high solids coatings and other polymeric materials.

PETA can be synthesized through the reaction of phenylthioethanol and acryloyl chloride in the presence of a suitable catalyst. The resulting product is a clear, colorless liquid that is typically purified through distillation to remove any impurities.

In addition to its use in the production of polymers and copolymers, PETA is also used as a reagent in organic synthesis, particularly in the production of thiol-ene reactions. It is also used as a starting material for the production of other acrylate monomers, such

as 2-phenylthioethyl methacrylate (PTEMA).

Overall, 2-Phenylthioethyl Acrylate (PETA) is a versatile monomer that is widely used in the production of polymers and copolymers, particularly in the coatings, adhesives, and plastics industries. Its ability to undergo free radical polymerization and its low reactivity make it an attractive choice for use in a range of polymerization reactions, and its use is likely to continue to grow as new applications and uses are identified.
