2,2-(4,4-Distyryl)bisbenzoxazole is a benzoxazole fluorescent brightener. Its molecule contains a rigidly conjugated distyryl substituent structure, resulting in efficient UV absorption and strong blue fluorescence emission. It significantly improves the whiteness and brightness of materials and is widely used in plastics, fibers, coatings, and other fields. Global production in 2024 was expected to be approximately 5,500 tons, with an average selling price of US$12,000 per ton.

The main raw materials for 2,2-(4,4-diphenylethylene)bisbenzoxazole are diphenylethylene compounds and benzoxazole derivatives. The supply stability, price fluctuations, and environmental compliance costs of key upstream intermediates are directly transmitted to the midstream production process. The industry's development is driven by demand from downstream industries such as plastics and textiles, as well as environmental protection policies and technological upgrades. The global and Chinese markets are expected to continue to grow, and Chinese companies are expanding their market share by leveraging cost and technological advantages.
