## Abstracts

The global 2,2-Diisopropylpropanenitrile market size is predicted to grow from US\$ 8.02 million in 2025 to US\$ 11.35 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

2,2-Diisopropylpropionitrile is an organic compound belonging to the nitrile class, also known as 2-isopropyl-2,3-dimethylbutyronitrile. It is a pale yellow liquid commonly used as a pharmaceutical intermediate and a key raw material for the cooling agent WS-23. Upstream components mainly include basic nitrile compounds and isopropylated raw materials such as isopropanol/acetone. DIPPN is a key raw material or important intermediate in the synthesis of the next-generation cooling agent WS-23. Global sales in 2024 were approximately 800 tons, with an average market price of approximately US\$10/kg. The scale of single-line production capacity varies depending on the production process and investment scale of the production equipment, with industry gross profit ranging from 15% to 30%.

Global consumer demand for novel, long-lasting, and menthol-free cooling products continues to rise. DIPPN, as a core precursor for synthesizing high-performance novel cooling agents, directly benefits from the widespread use of cooling agent WS-23 in oral care, confectionery, and flavorings. The most significant challenges to the industry's development are the high technological barriers to synthesis and the safety control of highly toxic raw materials, which limit the entry of new competitors. The downstream application market is highly concentrated, with demand heavily correlated with orders from a few large cooling agent manufacturers.
