## Abstracts

The global 2,2,6,6-Tetramethyl-4-Piperidone market size is predicted to grow from US\$ 270 million in 2025 to US\$ 396 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Triacetone amine, also known as tetramethylpiperidone (2,2,6,6-Tetramethyl-4-Piperidone), occupies a core position in the production of hindered amine light stabilizers and is a key raw material for the development and manufacture of this type of light stabilizer. Based on tetramethyl piperidone, a variety of hindered amine light stabilizer intermediates and light stabilizer products can be synthesized, including tetramethyl piperidol, penta piperidol, and light stabilizer 770. These light stabilizers have become mainstream choices in the market due to their excellent performance and rapid development. In the production process of 2,2,6,6-Tetramethyl-4-Piperidone, it is mainly synthesized by condensation reaction between acetone and liquid ammonia. The condensation process produced multiple by-products, including two main unknown byproducts (referred to as unknown substance 2 and unknown substance 3 in the industry), with contents reaching 24.67% and 11.67%, respectively. By optimizing and reusing these by-products, not only can they be transformed into general products that can be used in industry, thereby achieving economic value, but also helping to achieve environmental protection goals and achieve 'zero emissions'. All by-products generated during the production process of 2,2,6,6-Tetramethyl-4-Piperidone have undergone appropriate treatment and processing in order to be converted into usable industrial products.

Light stabilizer is a chemical substance that can inhibit or weaken the degradation effect of light on polymer materials, improve the light resistance of polymer materials, and can usually be used in conjunction with antioxidants to better inhibit the photocatalytic

degradation of polymer materials. It belongs to a category of polymer material additives. As a key component in expressing the properties of polymer materials, the polymer additive industry is in the middle of the industrial chain, with downstream industries such as synthetic fibers and adhesives. With the steady growth of the global economy and the continuous expansion of material application fields, the demand for polymer materials is strong, and the market size is steadily growing, which has also opened up broad development space for the polymer material additive industry. The global Hindered Amine Light Stabilizers (HALS) market was valued at US\$ 1,598.73 million in 2022 and will reach US\$ 1,714.08 million by the end of 2029, growing at a CAGR of 2.40% during 2023-2029.
