2.5D X-ray inspection equipment is an advanced non-destructive testing device that combines the advantages of 2D and 3D detection technologies. It can provide detailed images of the internal structure of objects, helping users detect defects and control quality. The device emits X-rays to penetrate the object, uses detectors to capture the changes in X-ray intensity after passing through the object, generates 2D projection images of the internal structure of the object, and processes these images through specific algorithms to provide a certain degree of depth information, thereby achieving a 2.5D effect. It is widely used in electronic manufacturing, semiconductor packaging, automotive manufacturing, aerospace, etc., and can detect internal defects such as voids, cracks, and poor soldering in circuit boards, solder joints, semiconductor devices, etc.
