Abstracts

The global 2D Laser Tube Cutting Machine market size is predicted to grow from US$ 987 million in 2025 to US$ 1464 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2024, the global output of 2D laser tube cutting machines will reach 7340 units, with an average selling price of US$130k per unit. A 2D laser tube cutting machine is a CNC device specifically designed for flat (vertical) cutting of metal tubes. It typically consists of a fiber laser, a rotary clamp (chuck), a CNC system and servo drive, a rigid bed, and an automatic/semi-automatic loading system. Unlike 3D/multi-axis machines, 2D machines excel at high speed, high repeatability, low cost, and simple maintenance. They are suitable for mass production of large quantities of straight-cut or simply perforated tube fittings (such as furniture fittings, HVAC accessories, general structural parts, and exhaust pipes).

The upstream of the 2D laser tube cutting machine industry chain mainly includes suppliers of raw materials and core components such as fiber lasers (such as IPG Photonics), CNC systems and servo motors (such as Siemens and Yaskawa Electric), precision chucks, guide rails, optical lenses, and steel for machine tool structures; the midstream is the 2D laser tube cutting machine manufacturers, such as Bystronic and BLM GROUP, which are responsible for equipment design, integration, assembly and commissioning; the downstream is the pipe processing companies in the furniture manufacturing, automotive parts, heating, ventilation and air conditioning (HVAC), fitness equipment, building steel structures and general metal processing industries, which use equipment for batch, high-precision metal pipe cutting and hole processing production.
