The global 2D MEMS Probe Cards market size is predicted to grow from US\$ 939 million in 2025 to US\$ 1641 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

Global production of 2D MEMS probe cards is projected to reach 120 million units in 2025, with an average selling price of approximately \$8 per unit.

2D MEMS probe cards are vertical probe cards manufactured based on Micro-Electro-Mechanical Systems (MEMS) technology. Probes are fabricated on silicon wafers using MEMS processes and vertically arranged between the guide plate and the PCB to achieve high-precision electrical connections between chip pins and the testing machine during wafer testing. Their core advantages lie in their fine pitch, high pin count, high density, and low contact resistance, meeting the testing requirements of advanced process chips. The upstream includes suppliers of MEMS probe materials, PCBs, and mechanical components; the midstream consists of probe card R&D and manufacturing companies; and the downstream covers chip design, wafer foundry, packaging, and testing—all segments of the semiconductor industry chain.

United States market for 2D MEMS Probe Cards is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
