The global 2?m Medical Laser market size is predicted to grow from US\$ 213 million in 2025 to US\$ 315 million in 2031; it is expected to grow at a CAGR of 6.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A 2?m medical laser refers to a laser system operating around the 2000 nm wavelength, typically using thulium (2080 nm) or holmium (2100 nm) as the lasing medium. At this wavelength, biological tissues, polymers, and various materials exhibit strong absorption, allowing for highly localized heating with minimal collateral thermal damage. This makes 2?m lasers ideal for applications such as minimally invasive surgery, tissue ablation, hemostasis, and procedures in urology, ENT, and neurosurgery. Although 2?m lasers have been known for decades, recent advances in design have significantly improved their efficiency, stability, and clinical viability compared to UV and 1?m lasers, which do not offer the same absorption characteristics in these contexts.

United States market for 2?m Medical Laser is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
