The global 3-aminopropyltriethoxysilane market size is predicted to grow from US\$ 103 million in 2025 to US\$ 95.3 million in 2031; it is expected to grow at a CAGR of -1.2% from 2025 to 2031.

3-aminopropyltriethoxysilane is produced by triethoxysilane and NH₃ in autoclave reaction.

In the acrylonitrile process, cyanoethylsilane is thoxylated and then hydrogenated over Raney nickel at high hydrogen pressure.

The ammonia substitution process starts from chloropropyltriethoxysilane, and requires a large excess and high pressure of NH₃. With a 75-fold molar quantity of NH₃ with respect to the chloro component, selectivities for the primary amine of up to 8% have been reported. The correspondingly low space-time yields can only be improved if increased proportions of di- and even trisubstituted downstream products of the initially formed aminopropylsilane are acceptable.

3-Aminopropyltriethoxysilane is the aminosilane used as adhesion promoter for both adhesive and sealant formulations to improve substrate adhesion.

3-aminopropyltriethoxysilane industry is a relatively concentrated market, the first company is called Dow Corning, which accounts for about 20% of production volume. Jingzhou Jiangnan and Hubei Bluesky are also large companies accounting for about 13% of the market.

China and North America are the largest two production market in the world with 40% and 39% respectively. The number of Japan is 10% and that of Europe is 7%.
