In 2025, the global production of 3-dimethylaminopropylamine is approximately 127,000 tons, with an average selling price of about US\$3685 per ton. The single-line production capacity is approximately 7800 tons per year, with an average gross profit margin of about 10-20%. 3-dimethylaminopropylamine is a colorless and transparent organic liquid and an important chemical intermediate. It is commonly used in the production of betaine surfactants in personal care products such as shampoos and soaps. It is also widely used as an epoxy resin curing agent, ion exchange resin, dye, and polyurethane catalyst. Its characteristics include the presence of both primary and tertiary amine groups in its molecule, and it is corrosive and flammable.

The main upstream raw materials for 3-dimethylaminopropylamine are acrylonitrile and dimethylamine, both basic petrochemical products. Its downstream applications are highly concentrated, with the vast majority used in the synthesis of core precursors for mild surfactants in the personal care and household cleaning industries, and a very small portion used as an epoxy resin curing agent and bactericide intermediate in industrial applications.
