The global 300 mm Automatic Probe Station Kits market size is predicted to grow from US$ 500 million in 2025 to US$ 849 million in 2031; it is expected to grow at a CAGR of 9.2% from 2025 to 2031.

Probe stations allow a user to position electrical, optical or RF probes onto a device and to then test the response of that device to an external stimulus (electrical, optical or RF).

According to SEMI, worldwide sales of semiconductor manufacturing equipment increased 5% from $102 billion in 2021 to an all-time record of $107.6 billion last year. The record high for semiconductor manufacturing equipment sales in 2022 stems from the industry drive to add the fab capacity required to support long-term growth and innovations in key end markets including high-performance computing and automotive. Global sales of wafer processing equipment rose 8% in 2022, while other front-end segment billings grew 11%. After robust growth in 2021, assembly and packaging equipment sales decreased 19% last year while total test equipment billings contracted 4% year over year.
