The global 3A Molecular Sieve Activated Powder market size is predicted to grow from US$ 7011 million in 2025 to US$ 10130 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

3A molecular sieve activated powder is a product obtained by high-temperature calcination of molecular sieve powder. During calcination, the powder loses most of its moisture, giving the activated powder strong adsorption capacity, good dispersibility, and rapid adsorption performance. It is commonly used as an adsorbent with selective adsorption properties in production processes, effectively removing trace amounts of moisture and impurities from materials, preventing bubble formation, and extending the material's lifespan. Especially in the production of polymers such as polyurethane, 3A molecular sieve activated powder can adsorb moisture and impurities that affect quality without altering the product's physicochemical properties. The upstream of 3A molecular sieve activated powder is mainly the chemical raw material industry, providing aluminum sources, silicon sources, and potassium hydroxide, among other raw materials; the downstream is widely used in paints and coatings, insulating glass sealant strips, petrochemical dehydration, and drying of new energy battery materials.

In 2024, the global market price of activated 3A molecular sieve powder was US$1,928 per ton, with sales of approximately 3.53 million tons. Global production capacity was 3.7-3.8 million tons, and the industry profit margin was 15-25%.

United States market for 3A Molecular Sieve Activated Powder is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
