3D camera may refer to range camera and stereo camera

Range camera, a device which produces a 2D image showing the distance to points in a scene from a specific point.

Stereo camera, a type of camera with two or more lenses with separate image sensors or film frame for each lens, which allows the camera to simulate human binocular vision, and therefore capture three-dimensional images.

3D cameras enhance the quality of visuals by recording images in three dimension. Advantages like its gesture based screen operation and its distance measurement capability are expected to result in this market's profound growth rate of more than 41% by 2019.
